

**Yota Tsotra:** Born in Patras, Greece /  
Live and work in Basel, Switzerland

I am an artist and material scientist using a variety of media - painting, drawing, objects, installations, video and sound - to explore the overall concept of life, the connections between the atoms, components and beings, the energy required to break these relationships and the potential of a new perspective after the breakage. Research is an important part of my work, while the transactional practice of art, science and philosophy is my main concern and focus. <http://www.yotatsotra.com/home>
